# LE TRAN CAT LAM

Full-stack Software Engineer · Tech Lead

Ho Chi Minh City, Vietnam | +84 964 829 558 | letcal2003@gmail.com | linkedin.com/in/letcal | github.com/Let-cal

## Summary

Full-stack engineer who shipped Japanese-client systems on AWS serverless and .NET, then led the teams that extended them: sole developer of a smart-locker store, .NET lead on a 3-level approval system, acting tech lead for teams of up to 8. Reviews the team's code and reads requirements in Japanese (JLPT N3).

## Skills

**Languages**: TypeScript, JavaScript, C#, Python, Java, Dart, PHP, SQL
**Frameworks**: Next.js, React, Node.js, Express, ASP.NET Core (.NET 8), FastAPI, Flutter, Laravel, Socket.io, SignalR, Tailwind CSS, shadcn/ui, MUI, Sass/SCSS, Framer Motion, GSAP
**Cloud & DevOps**: AWS (Lambda, API Gateway, DynamoDB, S3, EC2, CloudWatch, IoT Core, SES, Amplify, SAM, RDS, CloudFront, WAF), Terraform, Docker, CI/CD (GitHub Actions, GitLab)
**Data & Testing**: database design (PostgreSQL, Oracle, DynamoDB), SQL Server, MySQL, MongoDB; Jest, Playwright, Cypress
**AI & Tools**: OpenAI Agents SDK, LiteLLM, MCP, tool calling, RAG (Qdrant, Cohere), Ollama, vLLM; Swagger, Figma, draw.io, Jira

## Experience

**SKG Software (Splus)**, Ho Chi Minh City — Aug 2025 – Sep 2026

*Software Engineer — acting Project Manager / Tech Lead* | Oct 2025 – Sep 2026
*Software Engineer Intern* | Aug 2025 – Oct 2025

**FlexyBox Phase 1** | *Smart-locker store on AWS serverless (Next.js, SAM, DynamoDB, fincode)* Sep 2025 – Oct 2025
- Wrote all of the Phase 1 code as PM and sole developer: designed the DynamoDB tables and GSIs, built serverless APIs with AWS SAM on Lambda and API Gateway, and the Next.js purchase and tenant-admin screens.
- Integrated fincode payments through a webhook so a 9-door locker unlocks only after payment clears, then shipped on or ahead of a self-set schedule into a live field trial with 1 tenant on 2 lockers.

**COA** | *Certificate of Analysis issuance system (C#, ASP.NET Core, Oracle)* Oct 2025 – Mar 2026
- Tech lead in a team of 4: designed the Oracle schema and built around 10 ASP.NET Core (.NET 8) Web API endpoints with Dapper for a 3-level, role-based approval flow.
- On final approval the API renders one of 6 PDF certificate formats and emails it; built about 6 client screens in Biz/Designer DT.
- Wrote and ran about 300 unit test cases (UAT found no more than 20 defects in total), working in the client's environment over AWS WorkSpaces without shared Git.

**FlexyBox Phase 2** | *Multi-tenant smart-locker platform (Next.js, AWS serverless, IoT Core)* Mar 2026 – Sep 2026
- Tech lead and PM for a team of 5 to 8 extending the platform to multi-tenant sales, rental and gacha; designed locker monitoring on AWS IoT Core plus rental, gacha, usage-history and LINE notification features.
- Reviewed the dev team's code, here and on every project, against a checklist of design, functionality, complexity, tests, naming and security. Mentored 3 interns (2 developers, 1 tester) while the team was at 8.

**AI Agent** | *Multi-tenant LLM agent service (Python, FastAPI, React, AWS)* Apr 2026 – Sep 2026
- Built the proof-of-concept admin console and agent chat UI (React, FastAPI) that was demoed to the client and moved the project into later phases.
- Designed the PostgreSQL schema and configured Terraform and Docker on AWS (Lambda, RDS, S3, CloudFront, WAF) for an agent calling around 15 business APIs through about 10 tools.

**TONGUE-AI and Driver MS** | *Internship projects (Next.js, Laravel)* Aug 2025 – Sep 2025
- TONGUE-AI (AI health check from tongue photos) and Driver MS (driver roll call and vehicle checks): requirements, sprint planning, UI/UX, a Japanese/English Next.js frontend, Laravel API fixes.

**FPT Japan**, Tokyo, Japan — Mar 2024

*Business Analyst Intern / UI-UX Designer*
- Wrote requirements, user roles and use-case flows, drew the architecture, workflow and data-model diagrams, and presented the plans and designs to stakeholders.

## Projects

**SitePlus** | *Site-selection platform for F&B and retail (React, Flutter, Node.js)* Jan 2025 – May 2025
- Team lead of 5; designed and built the whole mobile UI/UX in Figma and Flutter; the platform used RAG on Qdrant and Cohere. Code: github.com/Let-cal/SitePlus-FE, github.com/Let-cal/SitePlus-MB

## Education

**FPT University** | *Bachelor of IT (Software Engineering), GPA 7.66/10, 50% scholarship* | 2021 – 2025

## Certifications & Languages

**Languages**: Japanese JLPT N3 (Dec 2024); English — professional working proficiency (IELTS 6.0 equivalent, FPT University TRS601)
**Coursera**: Software Development Lifecycle (University of Minnesota, May 2023)
