LE TRAN CAT LAM

Software Engineer · Technical Project Manager

Ho Chi Minh City, Vietnam | +84 964 829 558 | letcal2003@gmail.com | linkedin.com/in/letcal | github.com/Let-cal

Summary

Software engineer who moved into project management within the first year at SKG Software: 6 Japanese-client projects in 14 months, the last two in parallel, with teams of up to 8. Writes the estimates and schedules, runs requirement meetings in Japanese (JLPT N3), and still reads and writes the code: Next.js, AWS serverless, .NET, Python.

Skills

Delivery: estimation and WBS, scheduling, Scrum, risk and release management, requirements definition, basic and detailed design, UML, wireframes, code review, UAT review; Redmine, Backlog, Jira, Figma, Excel, Word, PowerPoint
Cloud & AI: AWS (Lambda, API Gateway, DynamoDB, S3, EC2, CloudWatch, IoT Core, SAM, RDS, CloudFront, WAF), Terraform, Docker, CI/CD; OpenAI Agents SDK, LiteLLM, MCP, RAG, Ollama, vLLM
Engineering: TypeScript, JavaScript, C#, Python, SQL; Next.js, React, Node.js, ASP.NET Core (.NET 8), FastAPI; database design (PostgreSQL, Oracle, DynamoDB); Jest, Playwright, GitLab

Experience

SKG Software (Splus), Ho Chi Minh City — Aug 2025 – Sep 2026

Software Engineer — acting Project Manager / Tech Lead | Oct 2025 – Sep 2026
Software Engineer Intern | Aug 2025 – Oct 2025

AI Agent | *Multi-tenant LLM agent service (Python, FastAPI, React, AWS)* — Apr 2026 – Sep 2026

- Managed a team of 6 (3 until Jun 2026) in Scrum sprints, building an agent that drafts reports from the client's business systems through tool calling and RAG: around 15 APIs exposed as about 10 tools, on cloud or local LLMs.
- Built the proof-of-concept admin console and agent chat UI that was demoed to the client and carried the project into its next phases.
- Folded the AI Local track into AI Cloud and reorganised the team, cutting infrastructure cost and simplifying security, at the price of extra UAT checks on answer consistency until tenants moved to a hybrid mode.

FlexyBox Phase 2 | *Multi-tenant smart-locker platform (Next.js, AWS serverless, IoT Core)* — Mar 2026 – Sep 2026

- Led a team of 5 to 8 that turned the Phase 1 locker store into a platform where each tenant runs its own chain of lockers and switches sales, rental and gacha on or off. Mentored 3 interns (2 developers, 1 tester) while the team was at 8.
- Scoped the tenant admin console with the client: locker setup and IoT Core status, products and pricing per locker, usage history and audit logs, editable LINE notifications, and gacha survey dashboards.
- Estimated each phase and new feature as its own version, then resized the team between 8 and 5 to fit the effort the client signed off and the release dates it asked for.
- Ran production releases: version checks before go-live, the team on standby for UAT bugs so none reached end users, and a short review after each release that changed how the next one ran.

COA | *Certificate of Analysis issuance system (C#, ASP.NET Core, Oracle)* — Oct 2025 – Mar 2026

- Tech lead in a team of 4. Built around 10 ASP.NET Core (.NET 8) endpoints behind a 3-level, role-based approval flow that renders 6 PDF certificate formats and emails them on final sign-off, plus about 6 Biz/Designer DT screens.
- Wrote and ran about 300 unit test cases; UAT found no more than 20 defects across all releases.
- Worked in the client's environment over AWS WorkSpaces with no shared Git, tracking every change by manual merge and diff.

FlexyBox Phase 1 | *Smart-locker store on AWS serverless (Next.js, SAM, DynamoDB, fincode)* — Sep 2025 – Oct 2025

- Wrote all of the Phase 1 code as sole developer: SAM-based APIs on Lambda, API Gateway and DynamoDB, a fincode payment webhook that opens a 9-door locker only after payment clears, and the Next.js purchase and tenant-admin screens.
- Set the schedule, wrote the designs and delivered on time or early; the system then went into a live field trial with 1 tenant on 2 lockers, the gate before commercial launch.

TONGUE-AI and Driver MS | *Internship projects (Next.js, Laravel)* — Aug 2025 – Sep 2025

- TONGUE-AI (AI health check from tongue photos) and Driver MS (driver roll call and vehicle checks): requirements, sprint planning, UI/UX, a Japanese/English Next.js frontend, Laravel API fixes.

FPT Japan, Tokyo, Japan — Mar 2024

Business Analyst Intern / UI-UX Designer

- Wrote requirements, user roles and use-case flows, drew the architecture, workflow and data-model diagrams, and presented the plans and designs to stakeholders.

Education

FPT University | *Bachelor of IT (Software Engineering), GPA 7.66/10, 50% scholarship* | 2021 – 2025

Certifications & Languages

Languages: Japanese JLPT N3 (Dec 2024); English — professional working proficiency (IELTS 6.0 equivalent, FPT University TRS601)
Coursera: Project Management Principles and Practices (UC Irvine, May 2024); Software Development Lifecycle (University of Minnesota, May 2023)
